

AYUSH ROY

Full-Stack Developer • Software Engineering Intern

ayush.roy.dev@gmail.com • +91-89189-40799 • Bhubaneswar, Odisha, India • Open to Remote
github.com/yorayriniwnl • yorayriniwnl.vercel.app • linkedin.com/in/yorayriniwnl • devpost.com/yorayriniwnl

PROFESSIONAL SUMMARY

B.Tech Computer Science student at KIIT University (graduating 2027) with hands-on experience building full-stack web applications using React, Next.js, TypeScript, FastAPI, and Docker. Shipped 5 independent projects end-to-end, covering real-time WebSocket backends, 3D interactive frontends, REST API design, containerized deployments, and automated testing with 24 Vitest tests across 5 test suites. A proven rapid prototyper with 3 hackathon projects delivered end-to-end under tight deadlines.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React, Next.js, HTML5, CSS3, TailwindCSS, Three.js, React Three Fiber, Framer Motion

Backend: FastAPI, Flask, Node.js, REST APIs, WebSocket, SQLite

Testing: Vitest, Unit Testing, Integration Testing

DevOps & Tools: Docker, Docker Compose, Git, GitHub, Vercel, CI/CD, Linux, VS Code

ML & Computer Vision: OpenCV, Scikit-Learn, SVM, Streamlit

WORK EXPERIENCE

Independent Full-Stack Developer

Jan 2025 – Present

Self-Directed / Open Source • Bhubaneswar, India (Remote)

- Designed, built, and deployed 5 full-stack applications independently across frontend, backend, API, database, and DevOps layers.
- Owned the complete development lifecycle — requirements, architecture, implementation, testing, and Vercel deployment.
- Authored 24 Vitest tests across 5 test suites to validate core application functionality before each production release.
- Containerized all backend services using Docker, ensuring environment parity between local development and production across every project.
- Built WebSocket-based real-time data pipelines and REST API backends capable of supporting multiple concurrent clients.

PROJECTS

Personal Developer Portfolio

Mar 2026 – Apr 2026

yorayriniwnl.vercel.app • Next.js 16, TypeScript, Three.js, React Three Fiber, Framer Motion, Vitest, Vercel

- Built and deployed a production-grade portfolio using Next.js 16 and TypeScript; applied a lazy-loaded plugin architecture to maintain a lean initial bundle and enable modular feature extensions.
- Implemented a GPU-accelerated 3D particle system rendering 4,000 points in real time with React Three Fiber; integrated automated GitHub sync for live content updates.
- Achieved 100% coverage of core application features with 24 unit tests across 5 Vitest test suites, ensuring reliability before every deployment.

Yor Helios — Real-Time Energy Monitoring Dashboard

Jan 2026 – Present

github.com/yorayriniwnl/Yor-Helios • Python, FastAPI, TypeScript, Docker, WebSocket • In Development

- Architected a full-stack energy monitoring platform with a FastAPI REST backend and TypeScript frontend; orchestrated with Docker Compose for one-command reproducible deployments across environments.
- Built WebSocket-based real-time alert streaming with per-channel operator dashboards and configurable anomaly detection thresholds.
- Engineered a continuous anomaly engine that monitors energy consumption patterns and dispatches targeted alerts on threshold breaches.

Yor Zenith — Solar Energy Planning and Decision Support

Jan 2025 – Dec 2025

zenith-xi-snowy.vercel.app • React, TypeScript, Three.js, Python, FastAPI, Vercel

- Designed and built a full-stack solar feasibility platform: a React and Three.js 3D frontend connected to a Python FastAPI backend, deployed on Vercel.
- Engineered a simulation engine that ingests irradiance data and models solar panel placement across multiple roof configurations to assess energy output.
- Integrated financial analysis (subsidies, payback period, ROI) into a single interactive 3D dashboard, eliminating the need for separate reporting tools.

Yor AI vs. Real Image Detector

Dec 2025 – Apr 2026

yor-ai-vs-real-image.vercel.app • Python, OpenCV, Scikit-Learn, SVM, Streamlit, Vercel

- Trained an SVM classifier on LBP and GLCM texture features; achieved 78% accuracy on a held-out test set with under-2-second inference time on local hardware.
- Built a Streamlit web interface with a lighting-invariant preprocessing pipeline that returns classification results with confidence scores in real time.

Yor Mentor-Mentee Platform

Apr 2026

github.com/yorayriniwnl/Mentor-Mentee • Python, Flask, SQLite, Tkinter

- Developed a mentorship platform with a RESTful Flask API backend, SQLite persistence layer, and Tkinter desktop frontend.
- Built automated pairing logic that matches participants by declared skills, goals, and availability; supporting both headless API integration and standalone desktop usage.

EDUCATION

B.Tech — Computer Science and Communication Engineering

2023 – 2027 (Expected)

KIIT Deemed University, Bhubaneswar, Odisha

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming

ACHIEVEMENTS

- Shipped 3 competitive full-stack prototypes in Devpost hackathons under strict time constraints, demonstrating rapid prototyping and end-to-end delivery capabilities.
- Earned Pratham, Dwitiya, and Tritiya Sopan certifications through Bharat Scouts and Guides — three progressive levels of leadership and community service training.

CERTIFICATIONS

Business for Good: Fundamentals of Corporate Responsibility

Issued March 2026

London Business School • Credential ID: Z3LLTNQK95BM

Ethical Decision Making for Success in the Tech Industry

Issued March 2026

University of Colorado Boulder • Credential ID: RJKGJPEH6M9Q

Corporate Governance

Issued March 2026

Coursera • Credential ID: ELSNKURGPFGA
